## 2. Description

Apache Forrest is a publishing framework that transforms input from various sources into a unified presentation in one or more output formats. The modular and extensible plugin architecture is based on Apache Cocoon and relevant standards, which separates presentation from content. Forrest can generate static documents, or be used as a dynamic server, or be deployed by its automated facility.

## 3. Source and Releases

No release download page available.

Most recent releases:

Release	Version	Date
---------	---------	------

*Information about Apache Forrest*

Latest stable release	0.7	2005-06-23
-----------------------	-----	------------
