1. Introduction and explanation of symbols

Changes are sorted by "type" and then chronologically with the most recent at the top. These symbols denote the various action types:=add

2. Version 0.1 (not-released)

2.1. Changes to the Code Base

- Initial plugin code. The heart of this plugin is the ModuleGenerator. The generator is contacting the input module and gets an iterator of all attributes names. This iterator will be then used to receive the values of the key. Till now we only use a Object to String cast but an input module does not have to return a simple String but can return any object. This may cause ClassCastExceptions for the values. Committed by TS.

2.2. Changes to Documentation

- Adding initial samples and documentation Committed by TS.

2.3. Contributors to this release

We thank the following people for their contributions to this release.

This is a list of all people who participated as committers:
Thorsten Scherler (TS).

3. All Committers

This is a list of all people who have ever participated as committers on this project.

- Thorsten Scherler (TS)
- Volunteer needed (open)
