
Tuscany Example: Modified Calculator

Cristian Fiorentino
cristian.fiorentino@intel.com

March 9, 2007

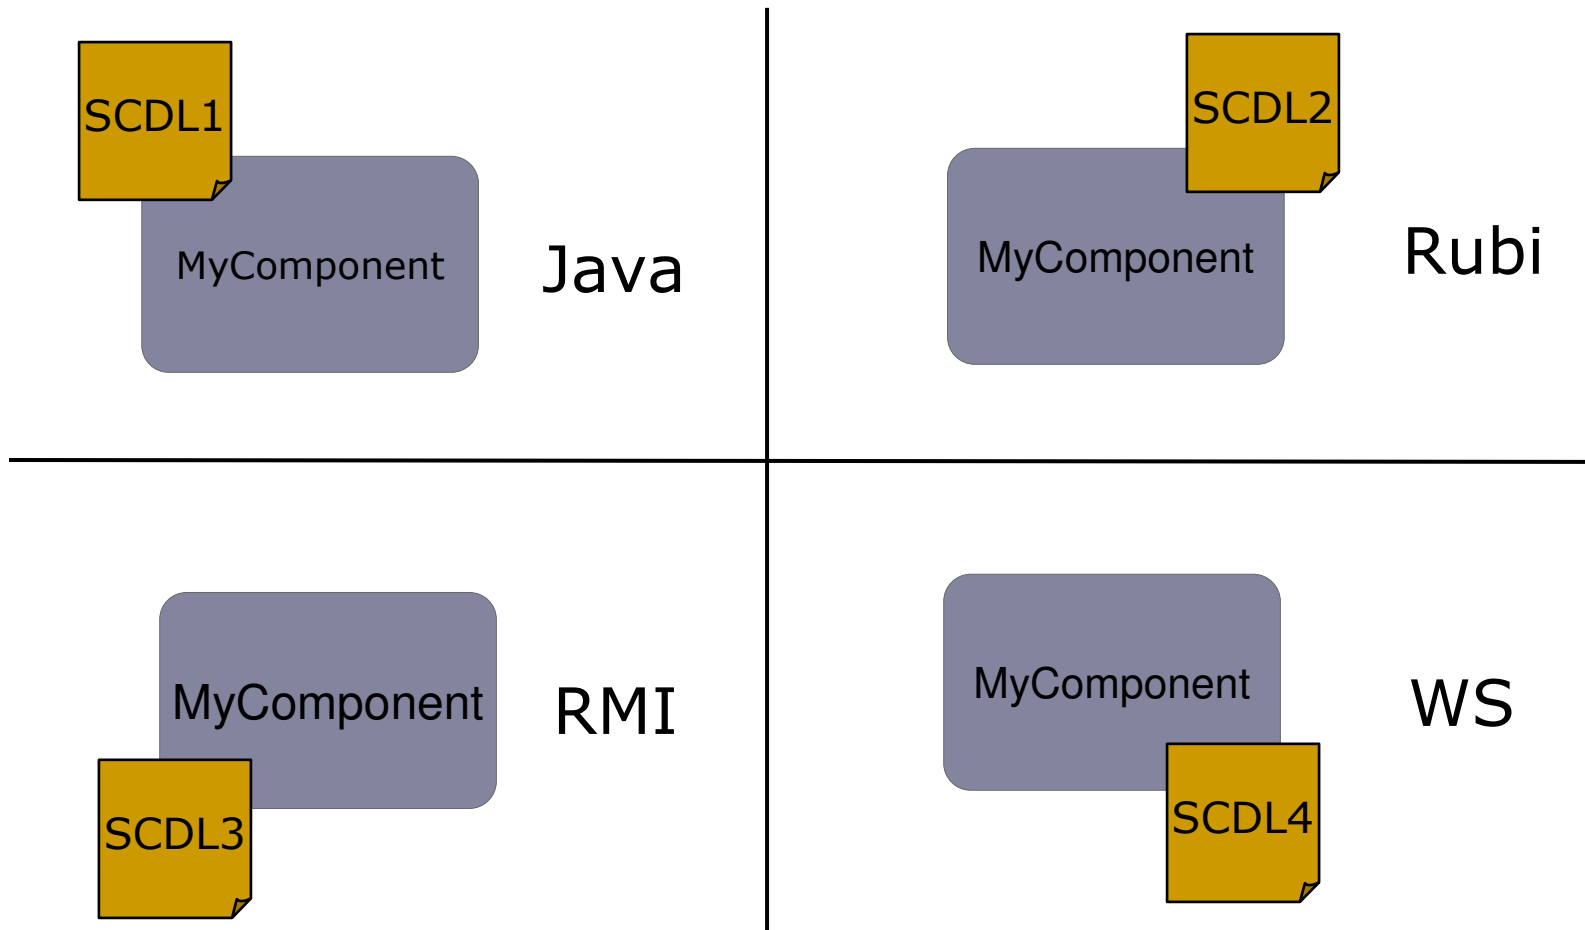

Intention

- Show Tuscany
 - **multi-language support** on writing services
 - **different transport bindings**
 - **simplicity** on **changing** among **services implementations**

Scenario

- A client needs to access to simple calculator operations: +, -, *, /
- We have different implementations of the calculator
 - ❑ Java (local to client)
 - ❑ Ruby (local to client)
 - ❑ RMI invocation (remote)
 - ❑ WS (running remotely on Tomcat)
- To distinguish among results, operations are performed in different ways for different languages:
 - ❑ Java: operation + 2
 - ❑ Ruby: operation + 1
 - ❑ RMI: operation + 4
 - ❑ WS: operation + 3

All Changes Just into a SCDL Definition

SCDL Definition (client)

```
<component name="CalculatorServiceComponent">
  <implementation.java class="calculator.CalculatorServiceImpl"/>
  <reference name="calculatorService">??</reference>
</component>
```

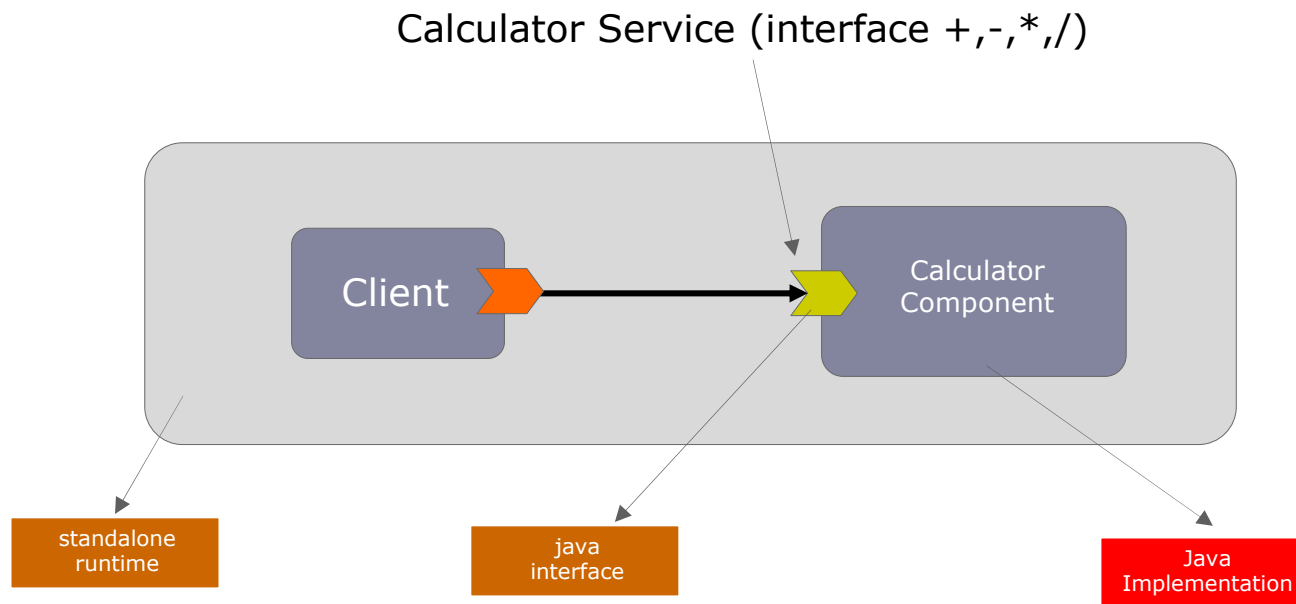

@Reference
CalculatorService calculatorService;

```
<!--
<component name="CalculatorComponent">
  <implementation.java class="calculator.JavaCalculator"/>
  <rb:implementation.rb script="CalculatorImpl.rb" class="CalculatorImpl"/>
</component>

<reference name="CalculatorRmiService">
  <interface.java interface="calculator.CalculatorService"/>
  <rmi:binding.rmi host="localhost" port="9999" serviceName="rmiCalculator"/>
</reference>

<reference name="CalculatorWSService">
  <interface.wsdl xmlns:wSDL="http://www.w3.org/2006/01/wSDL-instance"
    interface="http://calculator#wSDL.interface(Calculator)"
    wSDL:wSDLLocation="http://calculator/wSDL/calculator.wSDL" />
  <binding.ws endpoint="http://calculator#wSDL.endpoint (CalculatorService/ CalculatorServiceSOAP11port)"
    location="wSDL/calculator.wSDL" />
</reference>
-->
```

1) Java Implementation

SCDL Definition for Java Implementation

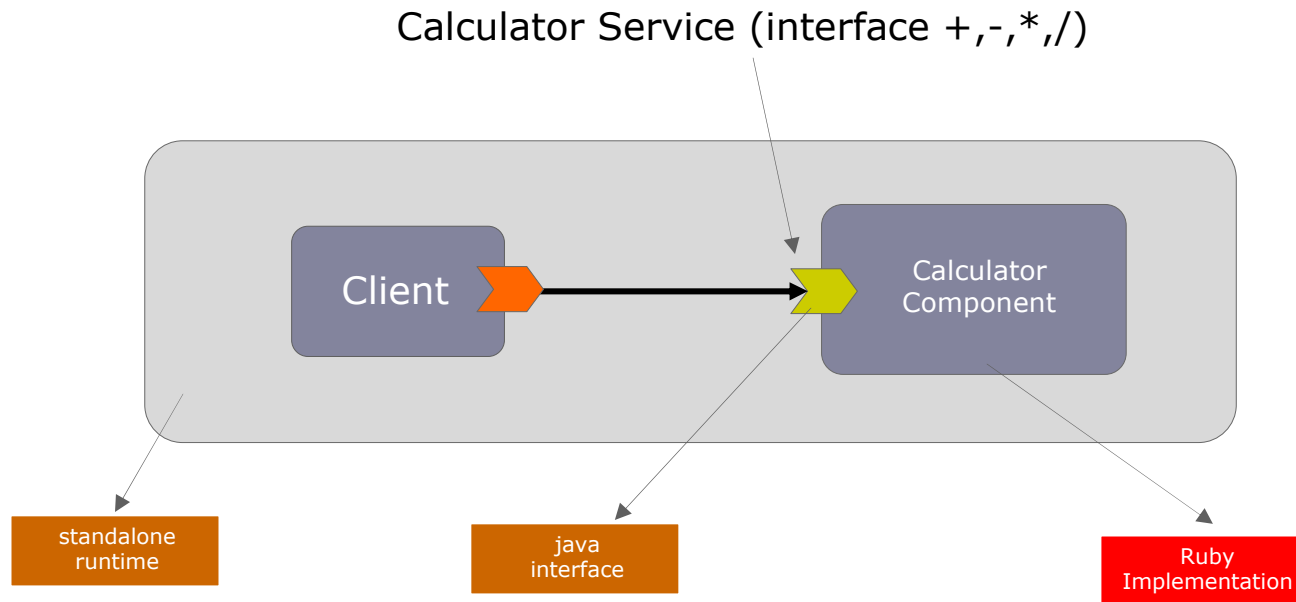

```
<component name="CalculatorServiceComponent">
  <implementation.java class="calculator.CalculatorServiceImpl"/>
  <reference name="calculatorService"> CalculatorComponent </reference>
</component>
```

```
<component name="CalculatorComponent">
  <implementation.java class="calculator.JavaCalculator"/>
  <!--rb:implementation.rb script="CalculatorImpl.rb" class="CalculatorImpl"/-->
</component>
```

```
<!--
<reference name="CalculatorRmiService">
  <interface.java interface="calculator.CalculatorService"/>
  <rmi:binding.rmi host="localhost" port="9999" serviceName="rmiCalculator"/>
</reference>
```

```
<reference name="CalculatorWSService">
  <interface.wsdl xmlns:wsc="http://www.w3.org/2006/01/wsdl-instance"
    interface="http://calculator#wsc.interface(Calculator)"
    wsc:wscLocation="http://calculator wsdl/calculator.wsdl" />
  <binding.ws endpoint="http://calculator#wsc.endpoint (CalculatorService/ CalculatorServiceSOAP11port)"
    location="wsdl/calculator.wsdl" />
</reference>
-->
```

2) Ruby Implementation

SCDL Definition for Ruby Implementation

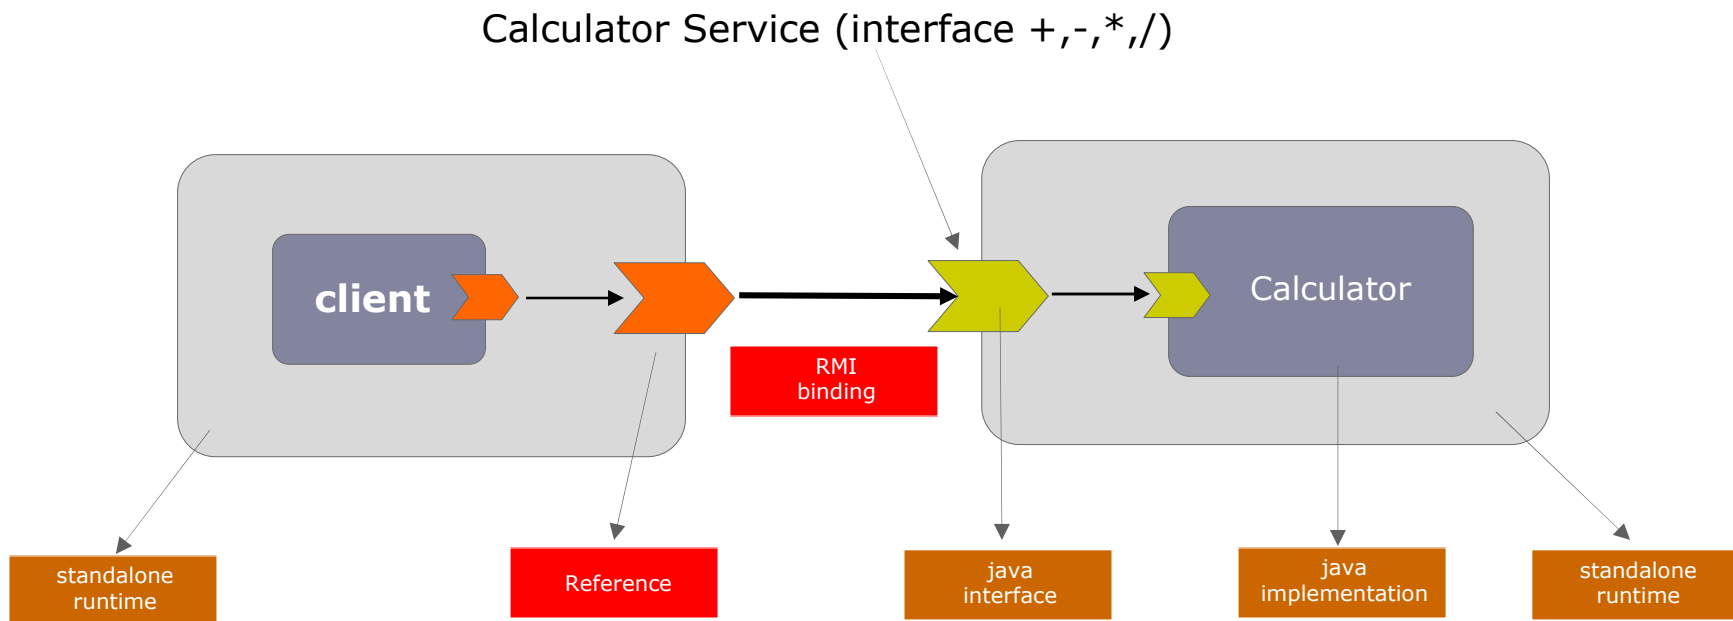

```
<component name="CalculatorServiceComponent">
  <implementation.java class="calculator.CalculatorServiceImpl"/>
  <reference name="calculatorService"> CalculatorComponent </reference>
</component>
```

```
<component name="CalculatorComponent">
  <!--implementation.java class="calculator.JavaCalculator"/-->
  <rb:implementation.rb script="CalculatorImpl.rb" class="CalculatorImpl"/>
</component>
```

```
<!--
<reference name="CalculatorRmiService">
  <interface.java interface="calculator.CalculatorService"/>
  <rmi:binding.rmi host="localhost" port="9999" serviceName="rmiCalculator"/>
</reference>
```

```
<reference name="CalculatorWSService">
  <interface.wsdl xmlns:wscdl="http://www.w3.org/2006/01/wsdl-instance"
    interface="http://calculator#wscdl.interface(Calculator)"
    wscdl:wscdlLocation="http://calculator wsdl/calculator.wsdl" />
  <binding.ws endpoint="http://calculator#wscdl.endpoint (CalculatorService/ CalculatorServiceSOAP11port)"
    location="wsdl/calculator.wsdl" />
</reference>
-->
```

3) RMI Implementation

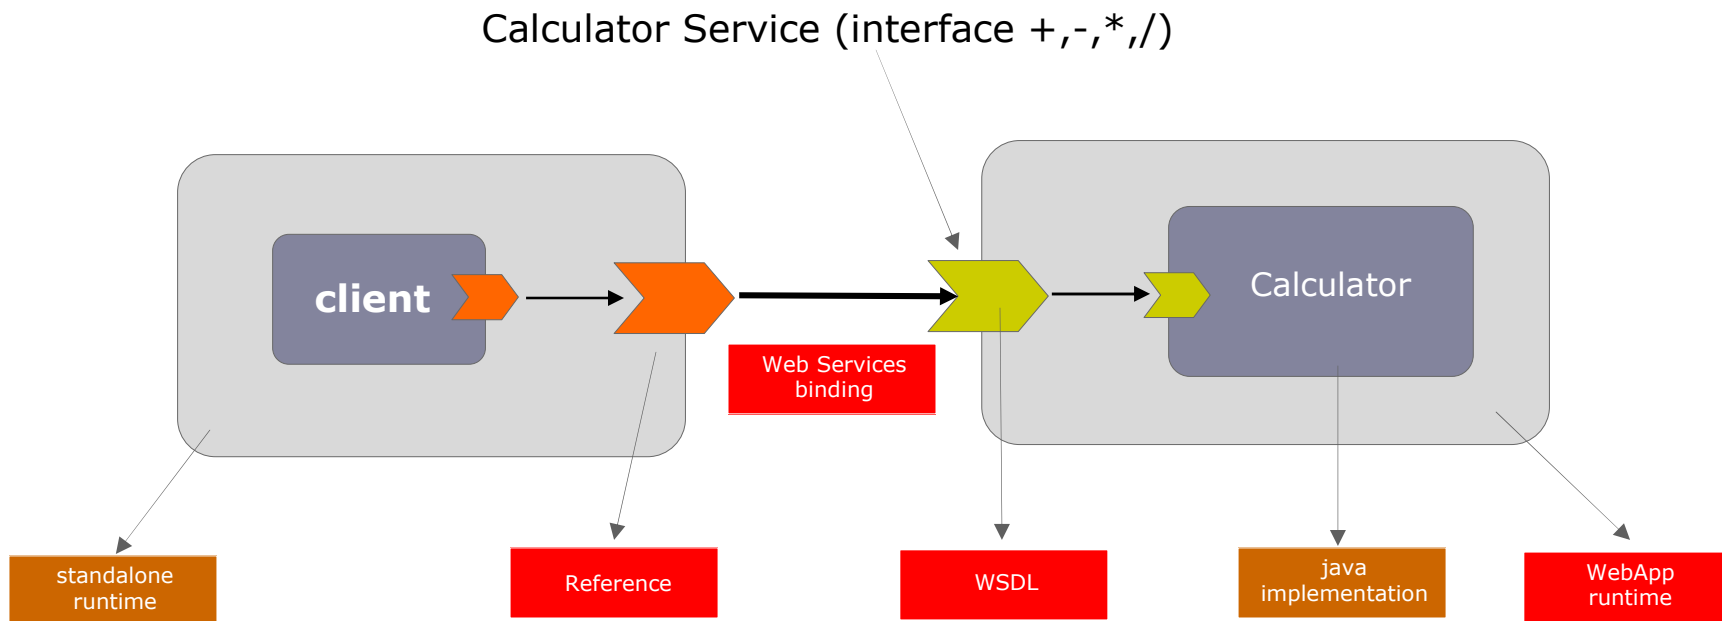

SCDL Definition for RMI

```
<component name="CalculatorServiceComponent">
  <implementation.java class="calculator.CalculatorServiceImpl"/>
  <reference name="calculatorService"> CalculatorRmiService </reference>
</component>

<!--
  <component name="CalculatorComponent">
    <implementation.java class="calculator.JavaCalculator"/>
    <rb:implementation.rb script="CalculatorImpl.rb" class="CalculatorImpl"/>
  </component>
-->
<reference name="CalculatorRmiService">
  <interface.java interface="calculator.CalculatorService"/>
  <rmi:binding.rmi host="localhost" port="9999" serviceName="rmiCalculator"/>
</reference>
<!--
  <reference name="CalculatorWSService">
    <interface.wsdl xmlns:wsc="http://www.w3.org/2006/01/wsdl-instance"
      interface="http://calculator#wsc.interface(Calculator)"
      wsc:wscLocation="http://calculator wsdl/calculator.wsdl" />
    <binding.ws endpoint="http://calculator#wsc.endpoint (CalculatorService/ CalculatorServiceSOAP11port)"
      location="wsdl/calculator.wsdl" />
  </reference>
-->
```

4) WS Implementation

SCDL Definition for WS

```
<component name="CalculatorServiceComponent">  
  <implementation.java class="calculator.CalculatorServiceImpl"/>  
  <reference name="calculatorService">CalculatorWSService</reference>  
</component>
```

```
<!--  
<component name="CalculatorComponent">  
  <implementation.java class="calculator.JavaCalculator"/>  
  <rb:implementation.rb script="CalculatorImpl.rb" class="CalculatorImpl"/>  
</component>
```

```
<reference name="CalculatorRmiService">  
  <interface.java interface="calculator.CalculatorService"/>  
  <rmi:binding.rmi host="localhost" port="9999" serviceName="rmiCalculator"/>  
</reference>  
-->
```

```
<reference name="CalculatorWSService">  
  <interface.wsdl xmlns:wedli="http://www.w3.org/2006/01/wedli-instance"  
    interface="http://calculator#wedli.interface(Calculator)"  
    wedli:wedliLocation="http://calculator wedli/calculator.wedli" />  
  <binding.ws endpoint="http://calculator#wedli.endpoint (CalculatorService/ CalculatorServiceSOAP11port)"  
    location="wedli/calculator.wedli" />  
</reference>
```

WS/RMI Calculator Implementation
