1. Sample Code

XML::Xerces comes with a number of sample applications:

- [SAXCount.pl](#): Uses the SAX interface to output a count of the number of elements in an XML document
- [SAX2Count.pl](#): Uses the SAX2 interface to output a count of the number of elements in an XML document
- [DOMCount.pl](#): Uses the DOM interface to output a count of the number of elements in an XML document
- [DOMPrint.pl](#): Uses the DOM interface to output a pretty-printed version of an XML file to STDOUT
- [DOMCreate.pl](#): Creates a simple XML document using the DOM interface and writes it to STDOUT
- [DOM2hash.pl](#): Uses the DOM interface to convert the file to a simple hash of lists representation
- [EnumVal.pl](#): Parses and input XML document and outputs the DTD information to STDOUT
- [SEnumVal.pl](#): Parses and input XML document and outputs the XML Schema information to STDOUT
