## Overview

---

This chapter describes how to import custom dictionaries and AutoText entries from Microsoft Office to OpenOffice.org. Currently the author knows no easy way of importing Microsoft Office auto-correct entries into OpenOffice.org.

### Acknowledgments

Thanks to the OOoAuthors team for proofreading this work, particularly Paul Miller and Jean Hollis Weber.

### Modifications and updates

<i>Version</i>	<i>Date</i>	<i>Description of Change</i>
1.0	27 October 2004	First published edition
1.1	1 November 2004	Corrected minor errors

# Custom Dictionaries

---

Dictionaries are used when checking any document for spelling errors. Custom dictionaries are enhanced dictionaries that may contain unique words or custom spelling of certain entries.

OpenOffice.org does not provide a way of importing Microsoft Office custom dictionaries. However, a macro has been developed for importing Microsoft Office custom dictionaries into OpenOffice.org. A link for downloading the file can be found at <http://oomacros.org/user.php#114694>.

To import Microsoft Office custom dictionaries:

Create a new Dictionary:

- 1) **Tools > Options... > Language Settings > Writing Aids > New.**
- 2) Give the dictionary a name.
- 3) Optionally choose a language for the dictionary.
- 4) Click **OK > OK**.

Download the file that contains the macro:

- 1) In a web browser start at <http://oomacros.org/user.php#114694> and click on the link for [Download Import/Export Dictionary Words](#).
- 2) This should display a Source Forge page. Click on the latest link for this file. At the time of writing, this is [ImportExportDictionary1-1.zip](#).
- 3) Click on the icon  to the right of a mirror (typically choose one closest to you, but it doesn't really matter).
- 4) The browser should display a "save file" dialog. Fill the dialog in, remembering where you saved the file.
- 5) Unzip the file you saved in the previous step.

In Microsoft Word, locate where the custom dictionaries are stored:

- 1) **Tools > Options... > Spelling & Grammar > Dictionaries**  
Typical location is:  
C:\Windows\Application Data\Microsoft\Proof\CUSTOM.DIC

Import the dictionary:

- 1) In OpenOffice.org, open the file that contains the import/export macro (instructions for downloading are above).
- 2) A confirmation dialog about running macros may be displayed. Click **Run**.
- 3) Click the **Run Macro** button (towards the top of the document).

- 4) Either type in the location of the custom dictionary to be imported or click on the ... button and navigate to it.
- 5) Choose the dictionary to import the words into (instructions for creating such a dictionary are above).
- 6) Click **Import**. Two dialogs will be displayed. The first says how many words the dictionary currently holds and the second how many words the dictionary holds after the import.
- 7) Click **Close**.
- 8) Close the file and the job is done.

## AutoText Entries

---

AutoText is a feature that stores formatted text, text with graphics, tables and fields and provides the means to easily insert the saved material into documents.

OpenOffice.org stores AutoText entries in XML files in specified folders. Microsoft Word stores AutoText entries in template files, typically Normal.dot. To import the AutoText entries from these Microsoft Word templates, follow these steps:

- 1) Locate the template. Typically templates are found in:  
C:\Windows\Application Data\Microsoft\Templates.
- 2) **Edit > AutoText**. (or *Control + F3*).
- 3) Optionally create a new category: Click **Categories...** > type in name for new category > choose the location for the new category > click **New > OK**.
- 4) Select the category into which the AutoText entries are to be imported.
- 5) **AutoText > Import**.
- 6) Navigate to and select the desired Microsoft Word template > click **Open**.
- 7) The AutoText entries should now be visible in the left list box of the dialog.
- 8) Click **Close**.

## AutoCorrect Entries

---

AutoCorrect is a feature to automatically correct words as you type. You can add entries to the AutoCorrect function to customize the way that OpenOffice.org operates.

The author has not been able to find a way of importing Microsoft Office AutoCorrect entries to OpenOffice.org. A thread discussing this problem can be viewed at:

<http://www.ooforum.org/forum/viewtopic.php?t=10248>.

Information from that thread is copied below, because using this information it is reportedly possible to import the “first hundred or so” entries.

There is a Word macro available from <http://word.mvps.org/FAQs/Customization/ExportAutocorrect.htm> for creating a Word document with the AutoCorrect entries.

OOo **AutoCorrect** files are typically stored in `./user/autocorr/acorrXXXX.dat` where `XXXX` corresponds to the number for a given locale. These files are zipped and contain the file `DocumentList.xml`, which looks like:

```
<block-list:block-list>
<block-list:block block-list:abbreviated-name="(C)" block-list:name="©"/>
<block-list:block block-list:abbreviated-name="yuor" block-list:name="your"/>
</block-list:block-list>
```

So it would not be too difficult to create a text file to look like this and to zip it into a `acorrXXXX.dat` file.
